

iCastar Platform — Delivery / Progress Report

Date: 01 July 2026 **Prepared for:** Project status review (Admin Panel + Web Flow) **Scope reference:** "Finalized Documentation for iCastar Platform" + "iCastar Web Flow MVP 1" **Codebase:** Icastar_UI_Updated (React + TypeScript frontend, backend at `app.icastar.com/api`)

Note: This report covers **technical feature completion** (verified from the codebase). The **commercial terms** (payment %, service/warranty days) are contract items and are marked clearly — they must be filled from the agreement, not the code.

1. Overall Completion Summary

Area	Status	Approx. Complete
Authentication & Access	Mostly done	~85%
Artist Dashboard	Mostly done	~80%
Recruiter Dashboard	Mostly done	~80%
Admin / Super Admin Panel	Strong / done	~85%
Notifications (in-app)	Done	~80%
Subscriptions & Payments	UI only, not functional	~20%
Messaging / Chat	UI mock only	~15%
Commission / Escrow payments	Not started	~0%
Live Auditions	Done incl. meeting link	~75%

Overall MVP feature completion (weighted): ~70–75%. The **core platform is delivered**; the **money + chat layer** (payments, subscriptions, real chat, commission) is the main pending block.

2. COMPLETED Features (working, real API integrated)

Authentication

- Email/password login — **done** (`services/apiClient.ts` , JWT bearer token in interceptor)
- JWT token-based session management — **done**
- Forgot Password / Reset OTP flow — **done** (recent commits; `ForgotPasswordPage` , `ResetPasswordPage`)
- Role-based access: Admin / Super Admin / Artist / Recruiter — **done** (separate layouts + route guards)

Artist Dashboard

- Registration / profile completion (multi-step) — **done** (`ArtistRegistrationForm` , `Step1/Step2` , `ProfileCompletionBar`)
- View jobs & apply to a job — **done** (`Jobs.tsx` , `ApplyJobModal` → `applicationsService`)

- Bookmark / save jobs — **done** (`bookmarksService`)
- Track application status — **done** (`Applications.tsx` , `applicationsService`)
- View auditions / apply — **done** (`Auditions.tsx` , `auditionService`)
- Verified badge page — **done as info page** (apply-for-badge flow is UI only)
- Settings — **done**

Recruiter Dashboard

- Post a job — **done** (`PostJobPage` , `recruiterJobsService`)
- View applicants / candidates — **done** (`ApplicantsPage` , `CandidatesPage`)
- Browse artist profiles — **done** (`BrowseArtistsPage` , `recruiterArtistsService`)
- Suggestions based on criteria — **done** (`SuggestionsPage`)
- Create / manage auditions + view applications + **meeting link** for live audition — **done** (`auditionService` , `CreateAuditionPage`)
- Boost / toggle job visibility — **done** (`recruiterJobsService` /`toggle-visibility`)
- Track hires / past jobs — **done** (`PastHiresPage` , `recruiterHiresService`)
- Notifications, Settings, Profile — **done**

Admin / Super Admin Panel (strongest area — 42 API endpoints wired)

- Manage recruiters & artists (view / ban / suspend / verify) — **done** (`superAdminService` , `statuses` `ACTIVE/INACTIVE/SUSPENDED/BANNED`)
- Job management + job approvals + toggle visibility — **done**
- Auditions management + audition approvals — **done**
- Categories & Skills management — **done**
- Job / Audition applications + Interviews — **done**
- Artist portfolio view — **done**
- Reports + report content moderation — **done**
- Platform config (platform email, support email, email-verification, notification toggles) — **done**
- Admin users management (Super Admin) — **done**

Notifications

- In-app notification panel + service — **done** (`notificationsService` , `NotificationPanel`)

3. 🟡 PARTIAL — UI built, backend/integration PENDING

Feature	What exists	What's missing
Subscription / Pricing plans	Pricing UI, plan cards (<code>PricingPageLayout</code> , <code>PricingCard</code>)	No purchase logic, no plan-activation API
Chat/message credits	<code>ChatCreditsPage</code> UI	No payment / credit deduction
Boost job visibility	<code>BoostJobModal</code> UI	No paid boost logic
Verified badge apply	Info page	No apply → admin-approval flow
Free-plan apply limit popup	—	"X free auditions" limit popup not implemented

4. ❌ NOT STARTED / MISSING (major pending work)

1. **Payment gateway (Razorpay / Stripe)** — no integration anywhere in frontend. Spec references razorpay but code has none.
2. **Subscription activation + payment validation** — not wired.
3. **Invoice generation, billing history, auto-renew** — missing.
4. **Per-message unlock payment (₹10/msg)** — missing.
5. **Real-time messaging (WebSocket / Firebase)** — `Messages.tsx` is **hardcoded mock data**; no messages service, no read receipts/timestamps.
6. **Commission & Escrow flow** (recruiter pays → platform commission → release to artist) — **not started**.
7. **Email/SMTTP sending + templates** (job alerts, application alerts, match alerts) — config toggles exist, actual sending pipeline pending on backend.
8. **OTP-based mobile login** — current auth is email/password only; OTP mobile login (per doc) **not implemented**.
9. **Account deactivation / reactivation** — **not implemented** (no endpoint).
10. **Recruiter suggestion engine** — `SuggestionsPage` UI exists but **no recommendation API** behind it.
11. **Push notifications, Analytics dashboard** — marked *Future / Phase 2* in the docs (out of MVP).

Note: Live auditions are **done** — auditions have create/publish/close + a `meetingLink` field for the live session (external meeting link, not custom in-app streaming).

5. 🕒 Estimated Effort for Remaining Work

Pending block	Rough effort
Payment gateway + subscription activation + invoices	8–12 working days
Real-time chat + read receipts + chat unlock	8–10 working days
Commission / escrow payment flow	5–7 working days
Email/SMTTP templates + sending	3–4 working days
OTP mobile login + free-plan limit popup + badge apply + account deactivation	4–5 working days
Recruiter suggestion engine	2–3 working days
Total (frontend + integration, excl. backend build)	~4–6 weeks (1 dev)

Note: This assumes the backend APIs for these modules are provided in parallel. If backend also has to be built for payments/chat/escrow, add more time on the backend side.

6. 💰 Commercial Terms — TO BE FILLED FROM CONTRACT

These are **not derivable from the code** — please confirm from the agreement:

Item	Value
Total project value	₹ _____
Payment received so far	₹ _____ (_____ %)
Payment remaining	₹ _____ (_____ %)
Service / support period offered	_____ days from delivery
Free bug-fix / warranty period	_____ days after go-live
Support after warranty	Chargeable / not available (as per contract)

Suggested standard clause (edit as needed):

"Post-delivery we provide __ **days of free support** for bugs in delivered features. After this period, or for any new feature / third-party (payment gateway, live streaming) issues, support is **billable / out of scope**. We are not liable for issues arising from third-party services (Razorpay, SMTP provider, hosting) outside the delivered code."

7. One-line Status

Core talent platform (auth, artist, recruiter, full admin panel, jobs, applications, auditions, notifications) is delivered (~70–75%). The money & chat layer — payments, subscriptions, real-time chat, commission/escrow, live auditions — is the remaining ~25–30% and needs ~5–7 weeks with backend support.
